

Product Overview

Tax Compliance & Automated Bookkeeping
for Nigerian Businesses

Siro Technologies — Confidential
July 2026

What Is Siro?

Siro is a tax compliance platform purpose-built for Nigerian businesses. It takes the pain out of bookkeeping by automatically organizing every naira that flows in and out of a business, tagging it for VAT, categorizing it, and producing clean reports that are ready for the Federal Inland Revenue Service (FIRS) when filing day arrives.

The core problem: Most Nigerian SMEs track finances with WhatsApp notes, Excel sheets, or not at all. When tax season hits, they scramble. Siro eliminates that scramble by keeping your business tax-ready every single day — not just at filing time.

The User Journey

Step 1: Sign Up & Onboarding

- Create Account — User signs up with email and password
- Email Verification — A 6-digit OTP confirms the email address
- Business Profile — Business name, type (Sole Proprietorship, Partnership, LLC), and industry (33 categories)
- Subscribe — No free tier. ₦9,999/month via Paystack (card, bank transfer)
- Welcome — After payment, the user chooses how to get transactions into Siro

Step 2: Getting Transactions In

There are three ways transactions enter Siro:

a) File Upload — AI-Powered (Clearsheet Engine)

The user uploads a bank statement in CSV, Excel, or PDF format. Behind the scenes:

- File Parsing — Siro reads the raw file. For PDFs, AI extracts structured data from scanned or digital statements.
- AI Standardization — Google Gemini detects columns (date, description, amount, debit/credit), classifies each row as INCOME or EXPENSE, detects the opening balance, account currency, and suggests exchange rates.
- Starting Balance Detection — When the AI detects an opening balance from the statement, it surfaces it to the user in the review screen. The user sees 'Detected Starting Balance' and 'Set as Account Start?' to save it to their business profile. This establishes the baseline for all financial calculations.
- Currency Handling — If the statement is in USD or another foreign currency, Siro shows the detected currency and suggested exchange rate. The user can accept or override.
- Review & Edit — Full preview of extracted transactions before import. Users can edit, delete, or correct rows.
- Smart Duplicate Detection — Each transaction gets a unique fingerprint. Uploading the same statement twice skips duplicates automatically.

b) Manual Entry

For cash transactions, POS settlements, or anything that doesn't appear on a bank statement — added one by one through a simple form.

c) Bank Sync (Coming Soon)

Direct connection to Nigerian banks via Mono's Open Banking API. Fully built, disabled while the partnership is finalized.

The Three-Pass Categorization Engine

This is the core intelligence that separates Siro from a basic spreadsheet.

Pass 1 — Business Memory (Tenant-Specific)

Has this specific business seen this description before? If a human previously categorized 'DANGOTE CEMENT LTD' as Construction for this business, Siro remembers and applies it automatically. Rules are tenant-specific — Business A's mappings never leak to Business B.

Pass 2 — Standard Rules (Built-In Patterns)

Siro has built-in recognition patterns for common Nigerian transactions:

Pattern	Category
MTN, Airtel, Glo, fuel, diesel	Fuel & Utilities
Paystack, Flutterwave, transfer fee	Bank & POS Charges
Salary, payroll, stipend, bonus	Salary & Wages
Facebook, Google Ads, Instagram	Marketing & Ads
AWS, Vercel, GitHub, Zoom	Software & IT
POS settlement, Opay payout	Sales

Pass 3 — Flag for Human Review

If neither Pass 1 nor Pass 2 matches, Siro does NOT guess or hallucinate a category. It flags the transaction as 'Pending Review' and waits for a human to categorize it. When resolved, the pattern is saved so Siro handles it automatically next time. The system gets smarter with every resolution.

VAT Tagging

Every transaction can be tagged as VAT-applicable (7.5%), VAT-exempt, or missing. Siro calculates:

- Output VAT — VAT collected from customers (on income)
- Input VAT — VAT paid on purchases (on expenses)
- $\text{Net VAT Payable} = \text{Output VAT} - \text{Input VAT}$

This is the number the business reports to FIRS.

Tax Computation (CITA)

Siro computes company income tax per the Companies Income Tax Act:

- Gross Income = Sum of all INCOME transactions
- Deductions = Sum of categorized EXPENSE transactions (auto + human-resolved)

- $\text{Taxable Income} = \text{Gross Income} - \text{Deductions}$
- $\text{Company Tax} = \text{Taxable Income} \times \text{Tax Rate}$

Bracket	CIT Rate
Small (below ₱25M turnover)	0%
Medium (₱25M – ₱100M)	20%
Large (above ₱100M)	30%

Expenses still in 'Pending Review' are excluded from deductions until resolved — a conservative, audit-safe approach.

The Dashboard

- Tax Readiness Score — Single percentage showing audit preparedness
 - Compliance Breakdown — VAT tagging, categorization, and documentation progress bars
 - Financial Snapshot — Total income, expenses, and net balance
 - Action Cards — Urgent items with direct links to fix them
 - Recent Activity — The 5 most recent transactions
-

Reports & Export

Choose a date range, select PDF or CSV format, and download a clean, pre-organized tax report instantly. No last-minute scramble.

Why Siro Is Different

Traditional Approach	Siro
Excel sheets, WhatsApp notes	Automated categorization engine
Accountant guesses categories	AI + human-in-the-loop, no hallucination
One-size-fits-all rules	Tenant-specific pattern memory that learns
End-of-quarter scramble	Real-time tax readiness score
Manual VAT calculation	Automatic VAT tagging + computation
Hiring a bookkeeper	Self-service at ₦9,999/month

How to Talk About Siro

For business owners:

"Siro keeps your business tax-ready every single day — not just at filing time."

For investors:

"Siro is the compliance infrastructure layer for Nigerian SMEs — automated bookkeeping, VAT tagging, and FIRS-ready reporting in one platform."

For accountants and consultants:

"Siro handles the 80% of transactions that are obvious, and routes the 20% that need judgment directly to you — with pattern learning so you never categorize the same thing twice."

Siro Technologies — Your business, always tax-ready.
